Proposal: To Sealcoat your asphalt with the industrial sealer, it has silica sand to fill the little cracks, plastic polymers and rubber to bond it together and give it a tough new mat. It has a 5 YEAR application life. It is a cold tar sealer, this lasts twice as long as the regular petroleum based sealcoat. We DO NOT add water like most sealcoating contractors. We are looking to give you the best possible product and lifespan. Everything is included with this. We blow it off with heavy duty commercial blowers and Blow out the cracks to remove dirt and vegetation. We then use a weed wacker to remove any vegetation or remaining root systems. Any dirt spots are hit with a stiff broom and commercial blower simultaneously to thoroughly clean off your asphalt. This will be applied by squeegee and NOT SPRAYED to allow the asphalt to soak up as much as possible and further increase the life of the asphalt. Sealcoat has a complete coverage warranty guaranteeing complete coverage of the asphalt by our sealcoat Area to be Restriped Back to Existing. All work to be completed in a workmanship like manner. Sealcoat has a Complete Coverage Warranty.

Total \$14700.00

Additional Price to Re-stripe Back to Existing.

Total \$2035.00
